Mean 19.057; Variance 63.971; scale 0.298 Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
Fight 1, 1954.1 represent palindromes and fragments of human-leucocyte-associated antigens. This sequence represents the human-leucocyte-associated antigens. This sequence represents the characteristic party of the protein protein associated antigens. This sequences can be used to isolate the protein protein associated with T-cell activation in mammalian T-cells, and is also immunologically cross reactive with the heat shock protein Hsc70. This found in a limited number of cell types, but is particularly expressed on B and T cells. p74 can be isolated by lysis of a suitable cell with an amphoteric detergent, and then passed through an affinity column containing a covalently bound HiA-B2702 palindromic peptide. Compositions comprising the extracellular fragment of p74 combined with LA-B2702.604 (see F89416), induces calcium influx, and inhibits cytotoxic T lymphocyte (CTL) differentiation or cytolysis. Candidate compounds can be screened for their effect on the cytolysis. Candidate compounds the amount of binding between the candidate compound and p74. Modulation of CTL activity can be inhibited in a cellular composition containing T-cells and antigen presenting cells (Apcs), by adding to the mix the extracellular portion of $74, in an amount sufficient to compete containing the binding of the p74 ligand.
                                                                                                                                                                                HIA-B2702 84-79-84 palindrome.

.T. 2 R71429 standard; peptide; 18 AA. 12429; (first entry)

Human MHC 1 alpha 1 domain peptide [Ala81]-Dk-(69-85).

Human MHC 1 alpha 1 domain peptide [Ala81]-Dk-(69-85).

Major histocompatibility complex class 1; MHC 1; cell receptor;
alpha 1 domain; peptide [Ala81]-Dk-(69-85); interaction modulation;
arthritis; neoplasias; lupus erythematosus.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Example 15; Page 36; 80pp; English.
R83061-R83085, R83090-R831996 and R92907-R92914 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is a diner of residues 75-84 of the alpha-1 domain of the class I MHC HIA-B2702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CILS)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               HIA-B2702 CTL modulating peptide (B2702.84-75/84-75).

                                                                                                                                                                                                                                                                                                                                                                     Gaps
                      Example 4; Page 45; 103pp; English.
R71424-R71438 are human major histocompatibility complex class 1
(MHC 1) alpha 1 domain derived peptides and peptide mutants, they
were used to modulate interactions between MHC 1 and cell surface
receptors. Via competitive inhibition the peptides diminish the
receptors response, this feature may be useful for the treatment
of neoplasias, lupus erythematosus and arthritis.

Numerical lyasts. Associated antigens. This sequence represents the human-leucocyte-associated antigens. This sequence represents the HLAB38.6084. These sequences can be used to isolate the protein p74 from a T-cell lyaste. P74 is a T-cell surface membrane protein associated with T-cell activation in mammalian T-cells, and is also immunologically cross reactive with the heat shock protein Hsc70. P74 is found in a limited number of cell types, but is particularly expressed on B and T cells. P74 can be isolated by lysis of a suitable cell with an amphoteric detergent, and then passed through an affinity column containing a covalently bound HLA-B7702 palindromic peptide.

Compositions comprising the extracellular fragment of P74 combined with CHLA-B2702.60-84 (see R95416), induces calcium influx, and inhibits cytotoxic I lymphocyte (CLL) differentiation or cytolysis. Candidate compounds can be screened for their effect on the cytolytic activity of CT-cells, by combining them with the extracellular portion of P74 and determining the amount of binding between the candidate compound and p74.

Containing T-cells and antigen presenting cells (APCS), by adding to the containing T-cells and antigen presenting cells (APCS), by adding to the containing the binding of the P74 ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             16-SEP-1993; U01758.

29 Example 13; Page 39; 61pp; English.

20 This peptide is used to modulate cytocoxic T-lymphocyte (CTL)

20 Cativity, either by inhibition or stimulation. It can be used for inhibiting CTL toxicity in transplantations, for inducing CTL

20 Cativity in parasaltic diseases and neoplasia and in studies on viral

21 Infection. The peptide can also be used for identifying CTLs which

22 Chis peptide is derived from the HLA-B38 antigen and corresponds

23 Chis peptide is derived from the HLA-B38 antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

R83061-R83065 and R92207-R92913 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence corresponds to residues 60-84 of the alpha-1 domain of the class I MHC HLAB38. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CTLS) of the patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    R95415 standard; peptide; 20 AA.

This sequence represents the Hila-B7.84 painforme. These sequences can be used to isolate the protein p74 from a T-cell lysate. p74 is a T-cell surface membrane protein associated with T-cell activation in mammalian T-cells, and is also immunologically cross reactive with the heat shock protein Hsc70. p74 is found in a limited number of cell types, but is particularly expressed on B and T cells. p74 can be isolated by lysis of a suitable cell with an amphoteric detergent, and then passed through an affinity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Compsns. comprising lymphoid surface membrane proteins - which may inhibit cytolytic activity and differentiation of CILs. R83061-R83085, R83090-R83096 and R92907-R92913 represent fragments of class I major histocompeatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HLA-B7. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CTLS)
column containing a covalently bound HLA-B2702 palindromic peptide. Compositions comprising the extracellular fragment of p74 combined with HLA-B2702.60-84 (see R95416), induces calcium influx, and inhibits cytotoxic T lymphocyte (CTL) differentiation or cytolysis. Candidate compounds can be screened for their effect on the cytolysis. Candidate compounds the amount of binding between the candidate compound determining the amount of binding between the candidate compound and p74. Modulation of CTL activity can be inhibited in a cellular composition mix the extracellular portion of p74, in an amount sufficient to compete with p74 for the binding of the p74 ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         õ
                                                                                                                                                                                                                                                                                                                                 Companie, regarding lymphoid surface membrane proteins - which may inhibit cytolytic activity and differentiation of CTLS.

Example: Page 11: 29pp: English.

CS 55413, and R95415-R95431 represent palindromes and fragments of human-leucocyte-associated antigens. This sequence represents the R5413, and R95415-R95431 represent palindromes and fragments of human-leucocyte-associated antigens. This sequence represents the protein pv4 from a T-cell lysate. P74 is a T-cell surface membrane protein pv4 from a T-cell lysate. P74 is a T-cell surface membrane protein cassociated with T-cell activation in mammalian T-cells, and is also immunologically cross reactive with the heat shock protein Hsc70. P74 is found in a limited number of cell types, but is particularly expressed on a mphoteric detergent, and then passed through an affinity column compatibing a covalently bound HAA-B2702 palindromic peptide.

Compositions comprising the extracellular fragment of p74 combined with HA-B2702.60-84 (see R95416), indices calcum influx, and inhibits compositions can be screened for their effect on the cytolytic activity of T-cells, by combining them with the extracellular portion of p74 and determining the amount of binding between the candidate compound and p74.

Modulation of CTL activity can be inhibited in a cellular composition containing T-cells and antigen presenting cells (APCS), by adding to the p74 ligand.

CALL APA STATE APA for the binding of the p74 ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   HIA: p74; alphal helix; human-leucocyte-associated antigen; inhibitor; T-cell lysate; membrane protein; mammal; heat shock protein; Hsc70; APC; B cell; calcium influx; cytotoxic I lymphocyte; CTL; differentiation; cytolysis; antigen presenting cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

Example: Page 11: 29pp: English.

This sequence represents the alphal-helix of the human-leucocyte-associated antigen B2702 (HLA-B2702). This sequence, particularly palidher antigen B2702 (HLA-B2702). This sequence, protein p74 from a T-cell lysate. p74 is a T-cell surface membrane protein associated with T-cell activation in mammalian T-cells, and is also immunologically cross reactive with the heat shock protein Hsc70. p74 is found in a limited number of cell types, but is particularly expressed on B and T cells. p74 can be isolated by lysis of a suitable
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

cell with an amphoteric detergent, and then passed through an affinity column containing a covalently bound HLA-B2702 palindromic peptide. Compositions comprising the extracellular fragment of P74 combined with HLA-B2702.60-84 (see R95416), induces calcium influx, and inhibits cytotoxic T lymphocyte (CTL) differentiation or cytolysis. Candidate compounds can be screened for their effect on the cytolysis. Candidate compounds the amount of binding between the candidate compound the amount of binding between the candidate compound and p74. Modulation of CTL activity can be inhibited in a cellular composition containing T-cells and antigen presenting cells (APCS), by adding to the mix the extracellular portion of p74, in an amount sufficient to compete with p74 for the binding of the p74 ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  R95430 standard; peptide; 20 AA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Mew poptide(s) based on Class I HLA antigen domains - used for modulating cytocxic T-lymphocyte activity towards targets Claim 11; Page 54; 61pp; English.
The peptide is used to modulate cytotoxic T-lymphocyte (CTL) activity, either by inhibition or stimulation. It can be used for inhibiting CTL toxicity in transplantations, for inducing CTL activity in parasitic diseases and neoplasia and in studies on viral infection. The peptide can also be used for identifying CTLs which bind to it and removing subsets of CTLs from a T-cell composition. This peptide sequence is more commonly found within larger peptide compounds of not more than 30 amino acids in length.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

R41208;
115-MAR-1994 (first entry)
Peptide fragment of Class I HLA peptide.
Human leukocyte antigen; HLA; peptide; transplantation; neoplasia;
parasitic disease; cytotoxic I lymphocyte; modulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Score 49; DB 18; Length Lu;

Manan-leucocyte-associated antigens. This sequence represents the human-leucocyte-associated antigens. This sequence represents the protein p74 from a T-cell lysate. p74 is a T-cell surface membrane protein p74 from a T-cell lysate. p74 is a T-cell surface membrane protein p74 from a T-cell lysate. p74 is a manalian T-cells, and is also immunologically cross reactive with the heat shock protein H8c70.

The protein associated with T-cell activation in manmalian T-cells, and is a surface and in a limited number of cell types, but is particularly compared in a limited number of cell types, but is particularly collumn containing a covalently bound HA-B2702 palindromic peptide. Compositions comprising the extracellular fragment of p74 combined with HA-B2702.60-84 (see R95416), induces calcium influx, and inhibits compounds can be screened for their effect on the cytolysis. Candidate compounds can be screened for their effect on the cytolysis. Candidate compounds can be screened for their effect on the cytolysis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      12-NOV-1996 (first entry)
HLA-B3702 84-75-84 palindrome.

Compsns. comprising lymphoid surface membrane proteins - which may inhibit cytolytic activity and differentiation of CTLs. Stanple, Page 9; 29pp. English. Raspels; 29pp. English. R85413, and R95415-R85431 represent palindromes and fragments of human-leucocyte-associated antigens. This sequence represents HLA-B2702.60-84. These sequences can be used to isolate the protein.p34.
determining the amount of binding between the candidate compound and p74. Modulation of CTL activity can be inhibited in a cellular composition containing T-cells and antigen presenting cells (APCs), by adding to the mix the extracellular portion of p74, in an amount sufficient to compete with p74 for the binding of the p74 ligand.
                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              03-OCT-1990 (first entry)
Papilloma virus type 16 L2 peptide no. 55.
Papilloma virus; PV type 16; immunoglobulin; L2; ELISA: cervical cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MEDS-) Medscand AB.

Dillner J, Dillner L;

WPI: 90-164122/21.

Detecting papillona virus infections - by identifying specific antibodies against partic. viral proteins or fragments, esp. for rapid diagnosis of cervical cancer.

Disclosure; 7pp; English.

The peptide is one of 66 overlapping peptides which together cover the entire sequences of the Li and L2 proteins of human PV type 16. The peptide was found to be unreactive with Ig Abs in the sera of petients with type 16 cervical cancer.

```
crown a T-cell lysate. p74 is a T-cell surface membrane protein associated with T-cell activation in mammalian T-cells, and is also immunologically cross reactive with the heat shock protein Has70. p74 is found in a limited number of cell types, but is particularly expressed on and T cells. p74 can be isolated by lysis of a suitable cell with an affinity column containing a covalently bound HLA-122702 palindromic peptide.

CC ompositions comprising the extracellular fragment of p74 combined with cclums containing a covalently bound HLA-122702 palindromic peptide.

CC ompositions comprising the extracellular fragment of p74 combined with be sequence, induces calcium influx, and inhibits expectors.

CC pymphocyte (CTL) differentiation or cytolysis. Candidate compounds can be screened for their effect on the cytolytic activity of T-cells, by combining the amount of binding between the candidate compound and p74. Modulation of CTL activity can be inhibited in a cellular composition containing cc extracellular portion of p74, in an amount sufficient to compete with p74 for the binding of the p74 ligand.

Mean 26.905; Variance 45.950; scale 0.586 Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

J. BIOL. CHEM. 266:6888-6893(1991).
-!- FUNCTION: WIRB ACTS AS A SIGNAL TRANSDUCER WHICH RESPONDS TO THE NITROGEN LEVEL OF CELL AND MODULATES THE ACTIVITY OF WIRC. IN NITROGEN LIMITATION WIRB ACTIVATES NINC BY PHOSPHORYLATING IT, WHILE IN NITROGEN EXCESS NIRC IS DEPHOSPHORYLATED AND CONSEQUENTLY
                                                                                                                                                    PROKARYOTA; GRACILICUTES; SCOTOBACTERIA; FACULTATIVELY ANAEROBIC RODS;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  INACTIVATED BY NTRB.

-!- FUNCTION: NTRB ACTS AS A SIGNAL TRANSDUCER WHICH RESPONDS TO THE
NITROGEN LEVEL OF CELL AND MODULARES THE ACTIVITY OF WITC.
INTROGEN LIMITATION NIRB ACTIVATES NTRC BY PHOSPHORYLATING IT,
WHILE IN NITROGEN EXCESS NTRC IS DEPHOSPHORYLATED AND CONSEQUENTLY
INACTIVATED BY NTRB.

-!- SIMILARITY TO OTHER PROKARYOTIC SENSORY TRANSDUCTION HISTIDINE
KINASES.

-!- FUNCTION: INVOLVED IN TRANSPORT FACTOR (RAN-GTP, KARYOPHERIN)-

MEDIATED PROPERIN IMPORT VIA THE F-G REPEAT-CONTAINING DOMAIN

WHICH ACTS AS A DOCKNIG SITE FOR SUBSTRATES. COULD ALSO HAVE

ISOMERASE OR CHAPERONE ACTIVITY AND MAY BIND RNA OR DNA.

-!- SUBSTLATATES LOCATION: NUCLEAR PORE COMPLEX. CYTOPLASMIC FILAMENTS.

-!- SIMILARITY: CONTAINS AND X-X-F-G REPEATS.

-!- SIMILARITY: CONTAINS A RANBP!-LIKE DOMAINS.

-!- SIMILARITY: CONTAINS A CYCLOPHILIN-LIKE PPIASE DOMAIN.

-!- FUNCTION: BETH-GLUCURONIDASE PLAYS AN IMPORTANT ROLE IN THE
DEGRADATION OF DERMATAN AND KERATAN SULFATES.
-!- CATALYTIC ACTIVITY: A BETA-D-GLUCURONOSIDE + H(2)O = AN
ALCOHOL + D-GLUCURONATE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        NEAR ITS

```
ligase-specific antibodies against it may be used as diagnostic agents for cancer, immunosuppression, hypersensitivity to DNA-damaging agents, etc. A DNA-ligase-antagonist protein may be used in therapy of these conditions, and DNA encoding the antagonist may be used in gene therapy.

Sequence 911 AA,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DNA fragment contg. corynebacterium biotin synthetase gene used to produce biotin synthetase with high efficiency Claim 6; Page 3; 20pp; Japanese.

The bioB gene from B flavum MJ-233 can be inserted into a plasmid and used to transform host microorganisms for increased production of biotin synthetase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DNA encoding enzyme reduces amylaceous saccharide to produce

Human MHC 1 alpha 1 domain peptide [Ala81]-Dk-(69-85).

Major histocompatibility complex class 1; MHC 1; cell receptor;

Majora 1 domain; peptide [Ala81]-Dk-(69-85); interaction modulation;

arthritis; neoplasias; lupus erythematosus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated human DNA ligase III gene - used to develop prods. to treat, prevent or diagnose DNA disorders such as abnormal cellular proliferation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence represents human DNA-ligase-III from activated T-lymphocytes, and includes a putative signal peptide sequence. DNA-ligase-III is a new protein larger than DNA-ligase-II, and differs from DNA-ligase-I in repairing single-strand breaks in DNA efficiently, but not performing blunt-end joining or AMP-dependent
                                                                                                                                                                                                                                                                                                                                                                                                   Example 4; Page 45; 103pp; English.

7124-R71438 are human major histocompatibility complex class 1
(MHC 1) alpha 1 domain derived peptides and peptide mutants, they
were used to modulate interactions between MHC 1 and cell surface
receptors. Via competitive Inhibition the peptides diminish the
receptors response, this feature may be useful for the treatment
of neoplasias, lupus erythematosus and arthritis.

R83061-R83085, R83090-R83096 and R82907-R92914 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is a dimer of residues 75-84 of the alpha-1 domain of the class I MHC HLA-B2702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Disclosure; Page 167-171; 256pp; English.

R76070 is the S.cerevisisae mismatch repair pathway protein MSH1, containing the IZCA5 epitope. It is used in the analysis of possible mutations in the human mismatch repair genes. Defects or alterations in such a gene result in the accumulation of unstable repeated DNA sequences, a feature of a number of different cancers. The identification of a defect in the mismatch repair pathway can be particular mammalian cancer e.g colorectal, ovarian, endometrial (uterine), renal, bladder, skin, rectal and bowel. The nuclectide sequences and polypeptides of the hMSH2 gene may also be used for Sequence 971 AA;
                                                                                                                                             16-0AN-1996 (first entry)
Yeast MSH1 protein with I2CA5 epitope tag.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 3; Page 21-22: 178pp; English.

Claim 3; Page 21-22: 178pp; English.

This sequence represents an enzyme that forms a non-reducing sugar with a trehalose end group, from a reducing amylaceous saccharide. The analyse of group, from a reducing amylaceous saccharides have a degree of glucose polymerisation of 3 or higher. This sequence was extracted from a liquid culture of Rhizobium of this sequence, the encoding sequence was obtained. The encoding sequence was obtained. The encoding sequence was obtained. The encoding sequence of chis sequence, the encoding sequence was obtained for the DNA encoding enzyme of transformants. This can also be performed for the DNA encoding enzyme of 536 (see T04156), which was obtained from Arthrobacter sp. 036. The CC on-reducing sugars produced by the action of these enzymes can be used to food, cosmetics, pharmaceuticals and feeds. They are used as sweeteners, taste and quality improvers, stabilisers fillers, excipients and adjuvants. The sugars can also be used as intermediates for can adjuvants. The advantages with using these sugars, are that, they are ccc practically non-reducing (so no browning reaction occurs when they are consistly and moisture-retaining properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

Tomposes. comprising lymphoid surface membrane proteins - which may inhibit cytolytic activity and differentiation of CTLS.

Example: Page 9, 29pp. English.

CC R95413, and R95415-R95431 represent palindromes and fragments of human-leucocyte-associated antigens. This sequence represents the human-leucocyte antiques on be used to isolate he protein py4 from a T-cell activation in mammalian T-cells, and is also immunologically corress reactive with the heat shock protein Hs70. py4 is found in a corst reactive with the heat shock protein Hs70. py4 is found in a climited number of cell types, but is particularly expressed on B and T cells. py4 can be isolated by lysis of a suitable cell with an compositions comprising the extracellular fragment of py4 combined with compounds can be screened for their effect on the cytolysis. Candidate compounds can be screened for their effect on the cytolytic activity of determining Them with the extracellular portion of py4 and determining the amount of binding between the candidate componiation of CTL activity can be inhibited in a cellular composition containing T-cells and antigen presenting cells (APCs), by adding to the mix the extracellular portion of py4, in an amount sufficient to compete with py4 for the binding of the p74 ligand.
                                                                                                                                                                                                                                                                          12-NOV-1996 (first entry)

EXEMPLE 13; Page 32; 80pp; English.
R83061-R83085, R83090-R83096 and R92907-R92913 represent fragments of
Class I major histocompatibility complex (MHC) antigens. This sequence
corresponds to residues 60-84 of the alpha-1 domain of the class I MHC
HIAB38. These sequences can be used to extend the period of acceptance
by a recipient of a transplant from an MHC unmatched donor. The peptides
are administered to a patient in conjunction with a subtherapeutic amount
of an immunosuppressant. This is administered to the patient for a
limited period of time (compared to the lifetime administration for
current treatments). The peptides particularly modulate (or inhibit) the
sequence 25 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  HLAB38 CTL modulating pertide (B38.6084).
Cytotoxic T lymphocyte; CTL; major histocompatibility complex; MHC; Immunosuppressant; graft versus host disorder; transplantation; therapy; class I MHC; HLAB38.
                                                                                                                                                                                       Mew peptide(s) Dased on Class I HLA antigen domains - used for modulating cytocoxic T-lymphocyte activity towards targets brample 13; Page 39; 61pp; English.

Example 13; Page 39; 61pp; English.

Example 13; Page 39; 61pp; English.

The peptide is used to modulate cytotoxic T-lymphocyte (CTL) activity, either by inhibition or stimulation. It can be used for inhibiting CTL toxicity in transplantations, for inducing CTL infection. The peptide can also be used for identifying CTLs which bind to it and removing subsets of CTLs from T-cell composition. This peptide is derived from the HLA-B38 antigen and corresponds to the mainly acid positions 60-84 of that antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

New DNA for class 1 human leucocyte antigens and derived probes and transformed cells, useful for DNA typing, as immunogens etc.

Disclosure; Pages 12-13; 23pp; English.

The HLA class I DNA can be used a source of probes for use in DNA typing. Transformed cells, which are useful as immunogens, can be obtained by introducing these DNAs into eucaryotic cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       HIA-BWS3 gene, DNA probe and transformant cells - used for immunisation, identifying specificity of antiserum etc.
Claim 2; Page 1; 11pp; Japanese.
Probes comprising part of the sequence encoding the protein can be used to identify Class I genes. The DNA can be expressed for immunisation of animals and prodn. of monoclonal antibodies specific for the HIA-Bw53 antigen. See also J03112485 and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human leukocyte antigen; probe; major histocompatibility complex; MHC; class I.

New human neuronal nicotinic acetylcholine receptor alpha2 subunit DNA used to develop prods. for detection, diagnosis and therapy and for modulating activity activity.

Disclosure, Page 43-46; 54pp; English.

Disclosure, Page 43-46; 54pp; English.

DIA encoding the human nNaChR alpha2 subunit was isolated froma human thalama tissue cDNA library using corresp. rat cDNA. The control insert of one clone obtd. was ligated with the insert of another clone to generate a full-length alpha 2 subunit cDNA. The DNA can be used to famentify function nNaChRs. Cells contg. the DNA can be used for screening to identify cpds. Which modulate the activity of human nNaChRs. The human nNAChR alpha 2 subunit can be used to product antibodies which can be used in immunohistochemistry, diagnosis and creating animal models.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           30-NoV-1995 (first entry)
Alpha 2 subunit of a human neuronal nicotinic acetylcholine receptor.

New DNA for class 1 human leucocyte antigens and derived probes and transformed cells, useful for DNA typing, as immunogens etc.

Disclosure; Page 13: 23pp; English.

The HLA class I DNA can be used a source of probes for use in DNA typing. Transformed cells, which are useful as immunogens, can be obtained by introducing these DNAs into eucaryotic cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

Mean 28.882; Variance 64.246; scale 0.450 Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Structure of the genes encoding the rod-core linker
polypeptides of Mastigocladus laminosus phycobilisomes and
functional aspects of the
phycobiliprotein/linker-polypeptide interactions.

acts as a signal transducer that responds to the nitrogen level of the cell and modulates the activity of glnG protein; at a low nitrogen level, glnG protein is activated through phosphorylation; at a high nitrogen level, it is deactivated through dephosphorylation at a high nitrogen level, it is struction farmed through dephosphorylation as the superfamily glnL regulatory protein it app binding; regulatory protein; signal transduction #length 349 #molecular-weight 38556 #checksum 8402

Example 15; Page 36; RODP; English.

Example 15; RODP 183096 and R92907-R92914 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence.

Example 16; RODP 183096 and R92907-R92914 represent fragments of the class I MHC

Example 16; RODP 183096 and R92907-R92914 represent from an MHC unmatched of a coceptance by a recipient of a transplant from an MHC unmatched donor.

Example 16; RODP 183096 and R92907-R92914 represent to the period of the peptides are administered to a patient in conjunction with a complete for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly of the patient.

Example 18; RODP 183096 and R92907-R9299 and R92909 and R92909 of the patient.

Example 18; RODP 183096 and R92907-R9299 and R92909 and R9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC R95413, and R95415-7EF, 2012...

CL human-leucocyte-associated antigens. This sequence represents the human-leucocyte-associated antigens. This sequence represents the HLA-B2702 84-75-84 palindrome. These sequences can be used to isolate the protein p74 from a T-cell lysate. P74 is a T-cell surface membrane protein associated with T-cell activation in mammalian T-cells, and is also immunologically cross reactive with the heat shock protein HSC/0.

CC p74 is found in a limited number of cell types, but is particularly compassed on B and T cells. P74 can be isolated by 1915 of a suitable cell with an amphoteric detergent, and then passed through an affinity column containing a covalently bound HLA-B2702 palindromic peptide.

CC compositions comprising the extracellular fragment of P74 combined with HLA-B2702.60-84 (see R95416), induces calcium influx, and inhibits cytotoxic T Jymphocyte (CTL) differentiation or cytolysis. Candidate compounds can be screened for their effect on the cytolytic activity of cT-cells, by combining them with the extracellular portion of P74 and determining the amount of binding between the candidate compound and p74.

Modulation of CTL activity can be inhibited in a cellular composition content p74 for the binding of the P74 in an amount sufficient to compete with P74 for the binding of the P74 in an amount sufficient to compete sequence 20 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Example 15; Page 36; 80pp; English.
R83061-R83085, R83090-R83096 and R92907-R92914 represent fragments of
class I major histocompatibility complex (MHC) antigens. This sequence
is an inverted dimer of residues 75-84 of the alpha-1 domain of the class
I MHC HLA-B2702. These sequences can be used to extend the period of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      16-MAY-1996 (first entry)
HIA-B3702 CTL modulating peptide (B2702.84-75/75-84).
Cytotoxic T lymphocyte: CTL; major histocompatibility complex; MHC; immunosuppressant; graft versus host disorder; transplantation; therapy; class I MHC; HLA-B2702.
                         12-NOV-1996 (first entry)
HLA-B2702 84-75-84 palindrome.
HLA-B2704 alphal-helix; human-leucocyte-associated antigen; inhibitor;
T-cell lysate; membrane protein; mammal; heat shock protein; Hsc70; APC;
B cell; calcium influx; cytotoxic I lymphocyte; CTL; differentiation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ij
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Compsns. comprising lymphoid surface membrane proteins - which may hinblit cytolytic activity and differentiation of CTLs. R83061-R83085, R83090-R83096 and R92907-R92913 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HAA-B2702.

These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (comparate to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CTLs)
                      The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. CK B5443; and R95415-R95431 represent palindromes and fragments of human-leucocyte-associated antigens. This sequence represents the character of the protein professoriated antigens. This sequence represents the human-leucocyte-associated antigens. These sequences can be used to isolate the protein professoriated with T-cell lysate. P74 is a T-cell surface membrane protein associated with T-cell scattain in ammunalian T-cells, and is also immunologically cross reactive with the heat shock protein the scool isolated by lysis of the strong particularly expressed on B and T cells. P74 can be isolated by lysis of a suitable cell with an amphoteric detergent, and then passed through an affinity column containing a covalently bound HIA-B2702 palindromic compositions comprising the extracellular fragment of p74 combined with HIA-B2702.60-84 (see R95416), induces calcium influx, and inhibits cytotoxic T lymphocyte (CTL) differentiation or cytolysis.

Candidate compounds can be screened for their effect on the cytolytic activity of T-cells, by combining them with the extracellular portion of p74 and determining the amount of binding between the candidate compound compassion containing T-cells and antigen presenting cells (APCs), by adding to the mix the extracellular portion of p74, in an amount complex composition of p74, for the binding of the p74 ligand.

Sequence 20 AA;
                                                                                                                                                                            Example 15; Page 36; 80pp; English.

R83061-R83085, R83090-R83096 and R92207-R92914 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HLA-B2702.

These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (comparate to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CTLS)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   12-NOV-1996 (first entry)

R83061-R83085, R83090-R83096 and R892907-R92913 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HIA-B2702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuperessant. This is administered to administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inibit) the activity of the cytotoxic T lymphocytes (CTLs) of the patient.
                                                                                                                                                                                                            16-MAY-1996 (first entry)
HIA-B2702 CIL modulating peptide (B2702.84-75(T)/75-84(T)).
Cytotoxic T lymphocyte; CTL; major histocompatibility complex; MHC; immunosuppressant; graft versus host disorder; transplantation; therapy; class I MHC; HIA-B2702.

Disclosure; Fig 1; 8pp; Japanese.

The sequence is E. coli DNA polymerase II. The DNA encoding this sequence can be introduced into expression plasmids which can then be used to transform cells such that the new polymerase can be collected from the culture on an industrial scale.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

The E. coli DNA-polymerase-II (given in R70841) may be engineered by mutagenesis of the encoding DNA (085427) for use with novel combinations of deoxynucleotides and chain-terminating nucleotides in new DNA sequencing protocols. Variants pref. include D156A and/or E158A mutations.
                                                                                                                                                                                                                                               DNA-polymerase; DNA sequencing; 3'-5' exonuclease; replication; enzyme engineering; protein engineering; mutagenesis.

DNA sequences encoding galactoprotein b3 - produced using DNA constructs also antibodies to Gap b3 used to detect tumours that result in alevated expression of protein.

The sequence was deduced from 3 overlapping clones isolated from 5 bisclosure; Fig 6; 46pp; English.

The sequence was deduced from 3 overlapping clones isolated from 5 human T24 cell line cDNA library. The DNA can be used to express the Gap b3 protein which is a transformation-dependent cell surface glycoprotein. The C-terminal 32 AA segment is likely to constitute forming a glycopylated extracellular domain. The N-terminal region has seven homologus repeats, three of which include the putative forming a glycopylated extracellular domain. The alignment of stretch followed by a short (5 AAs) stretch. The alignment of glycine and hydrophobic residues in each repeat shows a similar glycine and hydrophobic residues in each repeat shows a similar the end of most of the longer stretches (except for the 2nd and 7th repeats. The protein may be used to produce antibodies and these, con the DNA sequences, can be used to detect and quantify levels of contain is indicative of certain cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DNA sequences encoding galactoprotein b3 - produced using DNA constructs also antibodies to Gap b3 used to detect tumours that result in elevated expression of protein.

Tresult in elevated expression of protein.

Disclosure; Fig 4; 46pp; English.

The sequence was deduced from 3 overlapping clones isolated from a hamster Nippy cDNA library. The DNA can be used to express the Gap b3 protein which is a transformation-dependent cell surface glycoprotein. The C-terminal 32 AA segment is likely to constitute the cytoplasmic domain with the longer 959 AA residue segment comming a glycopsylated extracellular domain. The protein may be used to produce antibodies and these, or the DNA sequences, can be used to detect and quantify levels of Gap b3 protein or mRNA in contain and contai
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Length 1051;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Score 68; DB 3; Length 1051

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence (SEQ ID no 2) was deduced from the nucleic acid sequence (SEQ ID no 2) was deduced from the nucleic acid sequence (SEQ ID no 2) was deduced from the nucleic acid sequence obtd. by screening a BamHI library constructed from EVH-4 infected equine dermal cells (NBL-6). The gC protein is homologous to its gC counterpart of other herpesviruses and is characterised by conserved regions within the gC homologues (see feature table). GC cheminal half positioned around six sites of cysteine conservation at residues 256, 318, 357, 361, 390 and 416, in this sequence, implying some degree of conservation of secondary and tertiary structure between gC homologues, presumably involving disulphide bonding. BHV-4 gC has at Asp 409 a site capable of eliciting an immune response. Vaccines derived from this sequence can be prepd., and they may be used to protect horses against EHV-4 infection, other live virus vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

It can be used to produce antibodies for detecting the intestinal oncofetal gene product. The encoding DNA and RNA can be used as probes for screening samples for the intestinal oncofetal gene or gene transcripts for detection of neoplastic cells, esp.
oncofoetal; onco-foetal; onco-fetal; intestine; gastrointestinal; cancer; tumour; growth; benign; malignant; neoplasm; metastasis.
